DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-3, 9-10 and 17-21 in Paper No. 9 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 9 recites the limitation "the method of claim 2" in line 2. There is insufficient antecedent basis for this limitation in the claim. Also, claim 2 is not a method claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

5. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application

Art Unit: 2826

being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claims 1-3, 9 and 17-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Elenius et al. (US 6,441,487).

7. Regarding claim 1, Elenius (e.g. figs. 1 and 2) shows an electronic package comprising:

- A dielectric substrate 22 having a major surface (top surface);
- And a conductive foil 30 having a smooth portion;

8. The conductive foil is laminated with the substrate major surface. Also, the smooth portion contacts the major surface of the dielectric substrate.

9. Regarding claim 2, Elenius discloses that the conductive foil may comprise aluminum, nickel or copper (col. 7/lls. 1-28).

10. Regarding claim 3, Elenius discloses that the conductive foil may comprise a high electrical conductivity material such as aluminum, nickel, titanium or copper (col. 7/lls. 1-28).

11. Regarding claim 9 (as understood), Elenius shows that the package was fabricated.

12. Regarding claim 17, Elenius (e.g. figs. 1 and 2) shows an electronic package comprising:

- A semiconductor substrate 12 having a major surface;

- A first mechanically compliant dielectric layer 22 formed over the major surface of the substrate and having a at least one first opening formed therethrough;
- A first electrical contact pad 18 formed in the first opening and in electrical contact with the substrate;
- A second mechanically compliant dielectric layer 24 formed over the first compliant layer and having at least one second opening formed therethrough wherein the second opening is substantially offset from the first opening;
- A mask layer 32 formed over the second compliant layer and having a third opening therethrough in communication with the second electrical contact pad;
- And a solder ball 28 solderably connected to the second electrical contact pad and extending through the third opening.

13. Regarding claim 18, Elenius shows that the mask is a solder mask.

14. Regarding claim 19, Elenius shows that the compliant layers can be made of benzocyclobutene. Benzocyclobutene is a photoresist material (e.g. US 6,361,926, col.1/lls. 56-59).

15. Regarding claim 20 and 21, Elenius discloses that the contact pads may comprise aluminum, nickel or copper (col. 7/lls. 1-28).

16. Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Applicant's Admitted Prior Art (APA).

17. Regarding claim 10, APA (e.g. fig. 1) shows a controlled contact pad comprising:

Art Unit: 2826

- A dielectric substrate 107 having a major surface;
- And a conductive foil laminated to the major surface.

18. The foil has a smooth 103 side and a dendritic side 105. Also, the dendritic side contacts the major surface of the dielectric substrate.
